PROFILE

Third-year Information Security and Computer Forensics student with practical work in network reconnaissance, password auditing, document analysis and Linux monitoring. Seeking a cybersecurity or digital forensics internship, supported by experience building PHP and Flutter applications.

SECURITY TRAINING

NetworkWalks | Cybersecurity Internship Training, 2026

Practical assignments in designated training environments, with screenshots, command logs and technical findings.

- Performed network scanning, service enumeration and web reconnaissance using Nmap/Zenmap, Gobuster and curl.
- Compiled scripts, evidence and investigation notes into structured GitHub submissions.

INVESTIGATION LAB

Mediroza Hospital | Black-box practice assessment

NetworkWalks assignment against an intentionally created practice website.

- Extracted hashes from three encrypted PDFs using pdf2john and resolved a hash-format issue so John the Ripper could load them.
- Recovered all three weak passwords through a dictionary attack and extracted document text using pdftotext.
- Analysed PDF metadata with pdfinfo; followed a backup-location clue and identified an exposed SQL backup containing simulated HR and shareholder records.
- Recorded commands, outputs and screenshots to support findings on weak passwords and exposed backup files.

SYSTEMS & MONITORING LABS

Independent security lab | VMware, Linux and Wazuh

- Built virtual environments with Kali Linux, Ubuntu, Ubuntu Server and intentionally vulnerable practice machines; configured NAT and troubleshot connectivity.
- Configured Linux auditd to monitor changes to SSH configuration and verified recorded events using ausearch.
- Worked through Wazuh indexer and manager installation on Ubuntu, developing familiarity with SIEM/XDR deployment.

INFORMATION SECURITY
& COMPUTER FORENSICS

TECHNICAL SKILLS

Security tools & environments

Nmap/Zenmap, Gobuster, curl, John the Ripper, pdf2john, pdfinfo, pdftotext, auditd; Kali Linux, Ubuntu, Windows and VMware.

Networking & security foundations

OSI/TCP-IP, DNS, ARP, TCP/UDP, subnetting and NAT; access control, least privilege, separation of duties, incident handling and IT audit concepts.

Development & documentation

PHP OOP, MySQL/PDO, HTML, CSS, JavaScript, Flutter/Dart and Git/GitHub; technical reporting, evidence organisation and troubleshooting.

EDUCATION

Information and Communications University | Zambia

BSc Information Security and Computer Forensics
Third year · In progress, 2026

Selected coursework: Computer Hacking Forensic Investigation I & II; Information Systems Security; Information Systems Audit; Network Security Administration I; LAN/MAN Administration; Operating Systems; Database Management System.

Sanje High School | 2022

School Certificate examination: passed all seven subjects, including English, Mathematics and Science.

CERTIFICATES

Introduction to Cybersecurity | 24 December 2025

Cisco Networking Academy · Course completion certificate

Web Pentesting Mastery – Hack | 4 August 2026

DevTown · Bootcamp participation and project completion
Hosted with Google Developer Groups – CSMU

SELECTED PROJECTS

AegisZ Sentinel | Cyber situational awareness platform

Built a PHP/MySQL MVC dashboard with audit logging and modules for assets, indicators, threats, alerts and incidents. Developed ingestion workers for URLhaus, OTX, NVD and CISA KEV.

UrbanCart | E-commerce platform for Zambia

Worked on PHP/MySQL store workflows, customer accounts, inventory and staff permissions. Configured transactional emails and troubleshot shared-hosting deployment and mobile usability.

InternLink | Student task marketplace

Developed a Flutter/Dart app connecting companies and students. Prepared Android release builds and configured Google Play Console closed testing.
